

Bungendore Village

Frogs Hollow Concept Plan

The Concept Plan has been developed to demonstrate a range of functions and facilities which may be considered for inclusion within Frogs Hollow. At the heart of the concept, a strong relationship to Turallo and Half-Mile creeks is fostered. The creeks bound the north and western side of Frogs Hollow, and vegetation of the creek provide a strong vertical feature on an otherwise horizontal site. The town of Bungendore is almost completely bordered by creeks, and as such the creeks give a sense of place within the landscape for the town.

The connections between Frogs Hollow, local streets in Bungendore and the surrounding areas are also strengthened in the concepts by linking Turallo Tce with pedestrian access ways to Gibraltar St, Frogs Hollow and future links to the showground. Open space is preserved and allows for a multi use and multi purpose activities on Frogs Hollow.

Corner entry sign references Frog Hollow

Mounding creates an amphitheatre space which can be utilised as an informal performance area, and for group activities. A shade structure is also provided

Avenue of street trees

Ramp access

Path under bridge to connect with Turallo Tce Common

Existing road to be converted to narrower path

Native grassland is restored adjacent to endemic riparian planting development

Cricket/Recreation Space

90° Parking

Protective tree fencing

Tree planting along the drainage channel

Connecting paths

Path under bridge future connection to showground

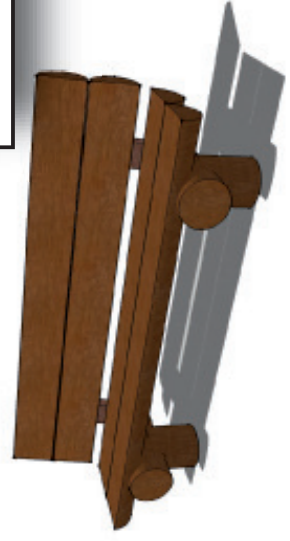

Willows removed and replaced with endemic species of riparian plants

The refurbished cricket pitch provides a flat, maintained dryland grass area for sports and recreation relieving the pressure on existing sports fields.

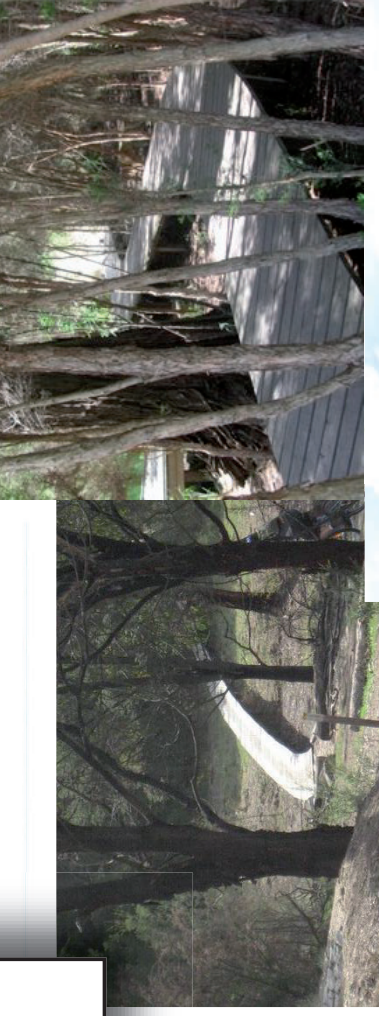

Picnic tables and seats are scattered along the path

Creek Line widened to include a permanent water body

A pathway joins Turallo Tce with Gibraltar St and Bungendore Rd via the creek line. The paths connect to a wider path network through Bungendore along the creeks and railway line.

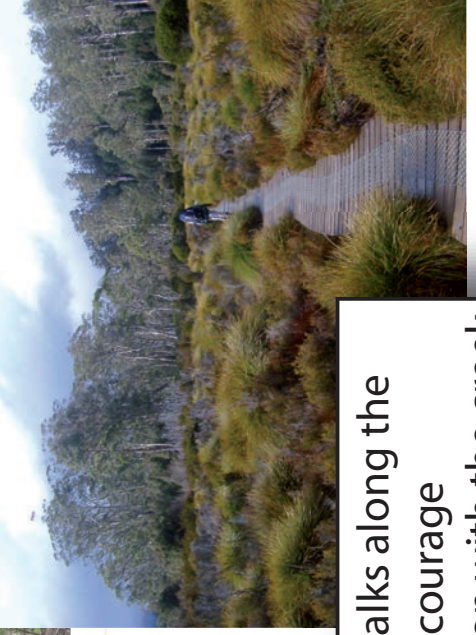

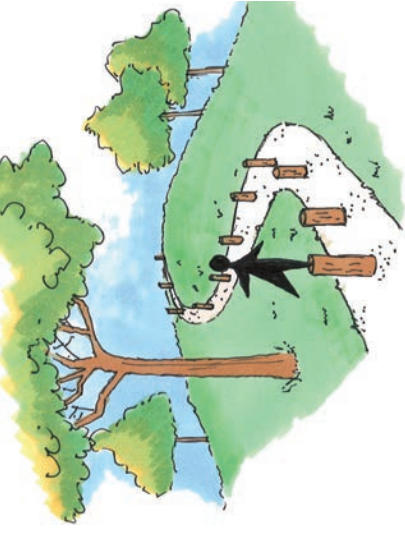

Naturalistic themed play areas are located at intervals along the path.

The design retains cultural heritage elements including elm planting along the creek, the water tower and open space characteristics.

Creek regeneration around boardwalks includes removal of some willows replacement with native riparian planting.

Boardwalks along the path encourage interaction with the creek.
